Hiring Team
Technology Early Internship Program

Dear Hiring Team,

I am a sophomore at the New Jersey Institute of Technology studying Information Technology with a minor in Game Programming, and I am excited to apply for your Summer 2027 software engineering internship. I learn fastest by building, and I am looking for a team where I can turn that habit into real engineering work.

My strongest preparation so far came from my Game Programming courses, where I modified the Quake 2 and Quake 4 engines in C and C++. Working inside a large, unfamiliar codebase taught me to read code I did not write, trace how systems connect, and change behavior without breaking what already works. I turned Quake 2 into a medieval simulator and Quake 4 into a custom party game, and I managed the work with Git and GitHub.

Outside of class, I built an AI assistant on a Raspberry Pi 4B that listens to speech and answers using a language model running locally through Ollama. The project required me to connect hardware, Linux, and scripting into one working system, and to debug problems across each layer. My coursework in Data Structures, Software Methodology, Database Management, and Network Security gives me the foundation to keep growing in Python, Java, SQL, and C++.

As a contracted Air Force ROTC cadet, I also bring discipline, reliability, and experience staying focused under pressure. Training with a team to strict standards has taught me to take ownership of my tasks, communicate clearly, and follow through. I will coordinate any ROTC obligations well in advance so that I can commit fully to the internship.

I would welcome the chance to contribute to your team and learn from your engineers. Thank you for your time and consideration, and I look forward to discussing how my skills can support your work.

Sincerely,

Dante Luglio
